## Valitor Magento Module

---

Integrating with Valitor could not be easier. Choose between Hosted, HTTP POST or XML integration options, or alternatively browse our selection of client libraries and e-commerce platform modules. Imagine having full creative control over payment flow, checkout design, and A/B testing without any card data risk.

AltaPay has made it much easier for you as merchant/developer to receive secure payments in your Magento web shop. AltaPay is fully integrated with Magento via a plug-in. All you have to do is to install the plug-in, which will only take a few minutes to complete.

We will show you how to complete the installation through a step-by-step guide. Follow this guide to start accepting payments globally.

To make the set-up as smooth as possible for you, this installation guide is divided into following sections:

## **Table of Contents**

<b>Prerequisites</b>	<b>3</b>
<b>Installation</b>	<b>3</b>
<b>Configuration of AltaPay bundle</b>	<b>6</b>
<b>Customization</b>	<b>7</b>
<b>FAQ</b>	<b>7</b>
<b>Misc</b>	<b>8</b>
<b>Change log</b>	<b>9</b>

## Prerequisites

We highly recommend gathering all the material below, before starting the installation.

1. Magento 1 minimum supported version by the plugin is currently Magento CE 1.9.x
2. PHP supported versions: 5.4.x - 5.6.x
3. PHP bc-math library
4. Prerequisites for the configuration of the plug-in. AltaPay provides these.
  - a. AltaPay credentials and gateway information
    - i. Username
    - ii. Password
    - iii. Terminal
    - iv. Gateway
5. Prerequisites for fraud detection
  - a. Agreement with external fraud partner such as ACI ReD or MaxMind. Be aware that only 'Accept' and 'Decline' recommendations are accepted. AltaPay enables the fraud detection on the terminal.

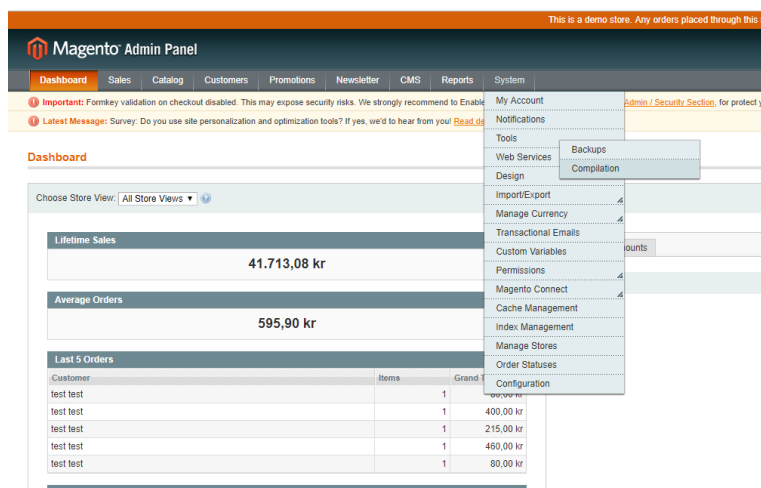

PHP 7 is not compatible with Magento 1. See, for example:

<http://magento.stackexchange.com/questions/107583/grand-total-not-updated-when-discount-code-is-applied>

## Installation

Via Magento Connect. Follow the steps below.

1. First step to take is to check if you have enabled compiler. If compiler is enabled, you need to disable it. To do so, log in to Magento Admin Panel. Go to System > Tools > Compilation

The screenshot shows the Magento Connect Manager interface. At the top, there's a header with the logo and 'MANAGER'. Below it, there are tabs for 'Extensions' and 'Settings'. In the 'Settings' tab, there are two sections: 'Settings' and 'Install New Extensions'. The 'Settings' section has two checkboxes: 'Put store on the maintenance mode while installing/upgrading/backup creation' (checked) and 'Create Backup' (unchecked) with a dropdown menu set to 'Database'. The 'Install New Extensions' section has two steps: '1 Search for modules via [Magento Connect](#).' and '2 Paste extension key to install:' followed by a text input field and an 'Install' button. Below this is a 'Direct package file upload' section with two steps: '1 Download or build package file.' and '2 Upload package file:' followed by a 'Choose File' button, the filename 'AltaPay\_for\_...to-1.5.0.tgz', and an 'Upload' button.

6. Installation progress will be shown in the console screen on the same page where you can check if installation was successful.

The screenshot shows a console output window with a checkbox 'Auto-scroll console contents' checked. The output text is: 'Package installed: community AltaPay\_for\_Magento1 1.5.0', 'Cleaning cache', and 'Cache cleaned successfully'. Below the console output, there's a green message box that says 'Procedure completed. Please check the output frame for useful information and refresh the page to see changes.' and a 'Refresh' button.

7. After successful installation make sure to enable compiler again if it was disabled in the first steps of installation.

## Configuration of AltaPay bundle

Current Configuration Scope: **Default Config** [Manage Stores](#)

**Configuration**

- GENERAL
  - General
  - Web
  - Design
  - Currency Setup
  - Store Email Addresses
  - Contacts
  - Reports
  - Content Management
- CATALOG
  - Catalog
  - Inventory
  - Google Sitemap
  - RSS Feeds
  - Email to a Friend
- THE FIND
  - Feed
- CUSTOMERS
  - Newsletter
  - Customer Configuration
  - Wishlist
- SALES
  - Sales
  - Sales Emails
  - PDF Print-outs

**Pensio Payments** [Save Config](#)

**Overview**

**Pensio - One Contact. One Contract.**

Pensio is a full-line supplier of payment solutions supporting customers, merchants and financial institutions to safely process payment transactions. We are focused on handling customer payments securely and efficiently and on offering merchants deep, real-time insight into transaction information.

Please select from our available methods below.

**API / Integration Settings**

**Note:**

Typically your installation for testing will be "https://testgateway.pensio.com" and for production it will be "https://yourdomain.pensio.com". Your Username and Password may be different for testing and live

Installation:  [STORE VIEW]

API Username:  [STORE VIEW]

API Password:  [STORE VIEW]

**Pensio Payment Gateway 2 - for additional payment method.**

**Note:**

Before you can use the Gateway you must make sure that your Magento installation is visible to the outside as Pensio's Payment Gateway will be performing callback calls with information about the payment.

Enable:  [STORE VIEW]

Terminal:  [STORE VIEW]

\* You need to set your username / password above before you can choose your Terminal.

Title:  [STORE VIEW]

Payment Action:  [STORE VIEW]

Sort Order:  [STORE VIEW]

1. Go to: System > Configuration > AltaPay (If you get a 404 error, please flush your cache and logout and in again).
2. Define the gateway URL, username and password (URL for test environment is https://testgateway.altapaysecure.com).
3. Save the config to have the plug-in to pull a list of available terminals
4. For each of the Gateway groups, you have the following options:

**Pensio Payment Gateway - Allows your customers to purchase with any of the payment options you have enabled in your Pensio account.**

**Note:**

Before you can use the Gateway you must make sure that your Magento installation is visible to the outside as Pensio's Payment Gateway will be performing callback calls with information about the payment.

Enable:  [STORE VIEW]

Terminal:  [STORE VIEW]

\* You need to set your username / password above before you can choose your Terminal.

Title:  [STORE VIEW]

Payment Action:  [STORE VIEW]

Sort Order:  [STORE VIEW]

- a. Enable = Enable the payment method in the checkout
- b. Terminal = Here you select the appropriate terminal
- c. Title = Define the title shown in the checkout (this will not affect the name used other places, e.g. the e-mail send to customers)
- d. Payment Action = Here you define if only an authorization should take place, or if the transaction should be captured immediately
- e. AVS = Enable Address Verification process
- f. Enforce AVS = If payment method does not provide AVS due to some reason, transaction will be rejected
- g. AVS accepted codes = Here you specify AVS Codes which you would like to accept (comma separated)\*
- h. Sort Order - Defines the order in which the payment methods are listed in checkout

Save the file and make sure the Application-xxxx.js and current.js files have been regenerated.

When you have successfully set up environment you can start processing transactions through AltaPay.

## Customization

It is possible to customize various aspects of the plug-in. Below is a list with the most relevant files

- Render the payment page  
app/design/frontend/base/default/template/altapay/checkout/form.phtml
- Style the payment form  
app/design/frontend/base/default/template/altapay/checkout/magento\_styling.css
- Display a failed page to the customer  
app/design/frontend/base/default/template/altapay/checkout/failed.phtml
- Define what is stated as the payment method in the consumer's e-mail  
app/design/frontend/base/default/template/altapay/payment/info/gateway.phtml

All customized files are subject of change when installing new version of the plug-in. Keep in mind to backup and merge modified files during installation.

## FAQ

1. PHP Warning: Input variables exceeded 1000. To increase the limit change max\_input\_vars in php.ini.  
For orders that contain too many products, this PHP warning may be issued. You will have to edit your php.ini file and restart your server.  
  
The variable that you must change is called max\_input\_vars. This is the maximum number of variables that can be sent in a request. You can change it, for example, to 3000. The default is 1000.
2. Description/unitPrice/quantity is required for each order line, but was not set for line: xxxx  
The same problem as above. The request is being truncated because the number of variables are exceeding the max\_input\_vars limit.
3. Logs directory for troubleshooting with AltaPay Support  
<Magento directory>/var/logs/altapay{DATE}.log where {DATE} represents the date when the log is created. For each date new log is created.
